FOREWORD

I welcome the publication of the Bibliography of Indian Scientific & Technical Publications displayed at the Exhibition. It is of enduring value and will remain available for consultation by all those interested in books long after the Exhibition is over. The compilation of a worth while bibliography is no easy matter. In this particular case, although no effort was spared by the organizers to collect all the books and periodicals published in India, the response has not been wholly satisfactory. The prodigious task of sorting out the sporadic collection, filling up glaring gaps, and compiling a classified list, was shouldered by a team of specialists in the National Library at Calcutta under the guidance of Shri B. S. Kesavan and the result has been, indeed, praiseworthy.

The compilation of a bibliography is a tribute to the librarian's art. Out of a large assortment of titles relating to a welter of subjects in a variety of languages, emerges a tidily arranged list which would help the interested reader not only to locate the book he needs, but also obtain some idea of its physical make-up. Behind this orderly arrangement lies expert knowledge and devoted work. Shri B. S. Kesavan and his colleagues have accomplished a particularly difficult task and have produced a publication of great merit and utility. But for their assistance, the compilation of the Bibliography and the orderly display of publications in this impressive Exhibition would have been well nigh difficult. The organisers are greatly indebted to them. They have the satisfaction that their work provides a sure guide to scholars and book lovers to find source materials from among the hundreds of books and periodicals published in India in various languages.

INTRODUCTION

In the month of July, the Council of Scientific and Industrial Research addressed Publishers and Associations of Publishers, Universities, Research Institutions, Research Stations, Industrial Laboratories, Learned Societies and Associations, Technical Institutes, Agricultural Colleges, Veterinary Colleges and Medical Colleges, Directors of Agriculture, Directors of Public Instruction, Directors of Industries, and Conservators of Forests of all the States of India, and other Departments, as well as a hundred and forty-four individuals, notifying them of the desire of the C.S.I.R. to organize in February, 1960 an Exhibition of scientific and technical books published in India. All those addressed were invited to participate in the Exhibition by sending in their publications, which would be included in a Directory giving full bibliographical details of each publication. The last date of receipt of application was announced as being September the 30th. Four thousand three hundred and eighty-three such letters were sent out. The intention of the C.S.I.R. to hold the Exhibition was also advertised in five book-trade periodicals and forty-one dailies in India. To help acquisition of material further, two Press releases were issued by the Press Information Bureau on June the 24th and July the 26th respectively. All this is mentioned to show that no trouble was spared in getting the fact of the Exhibition known to all the publishing agencies, official, non-official and individual, in this country.

The response to this publicity has been somewhat encouraging, though one would wish that it was more energetic and exhaustive. Altogether 4,148 publications have been received as a result of this appeal. Approximately a seventh part of these publications belongs to the category of ephemera by which is meant publication of not abiding value. There were a few scientific text-books for the lower classes in the primary stage, which though valuable to an educationist studying the evolution of text-books, could not be included in this bibliography, because not enough of them from all parts of the country were received to facilitate comparative study. They formed a very odd assortment of stray volumes, sometimes even without sequence to permit their being included in any systematic list.

After a survey of the material received, it was found that the National Library possessed sixteen hundred and ninety items in the Indian languages, which were not sent in by the publishers as a consequence of this appeal. Most of the publications sent in were those belonging to the last decade of scientific publishing which is, as it should be, considering that there was not much vigorous scientific publication in this country before that period. However, a few sporadic publications belonging to the beginning of the century and later have been received and included in the bibliography.

A remarkable feature of the receipts is that an institution which publishes a series of monographs has only thought fit to send odd copies in the series, leaving very big lacunae. This haphazard receipt is quite a feature from among many scientific and Government institutions. In the Indian languages it was also seen, for example in Kannada, that only the scientific publications of one writer and those of the Mysore University constituted a very high percentage of the receipts in that language. Fortunately, the National Library had the majority of the other publications in that language

and made up the lacunae to some degree. This was the case with most Indian language publications. Also one would have expected that the publishers would have sent publications of eminent Indian scientists who have really placed India on the scientific map. Not only were the important works of such scientists not sent, their biographies which have been published in a number of languages were not sent either. It is true that most of these eminent scientists have only contributed to international periodicals of repute and to a few of the Indian periodicals also. But the collected papers of these scientists have been published in this country at some intervals of time and we should have expected them to be included in the receipts. Sad to say, they are not.

If there was no lacuna in the serial productions which have been sent in haphazard fashion by the several institutions, if the standard publications of eminent Indian scientists in English were all to be found in the receipts, if the Government Departments and other autonomous institutions had sent in all their publications in full retrospect, then, it would be no exaggeration to say that the bulk of this volume would have been doubled and the index would not startle the reader as it does now with the omission of many household names, so to say, in the realm of scientific and technological publication. The National Library could not make up the lacunae in the English part of the publications by drawing upon its resources, because that would have required time and personnel, which, considering the date of the exhibition in February, and the time it would take to print the entries for the Bibliography, were not available for the purpose. It is proposed at a later date, now that we know what has been left out, to bring out a second publication of similar quality supplementing the information contained in the present Bibliography.

Now that we have indicated the scope and limitations of the Bibliography we shall now proceed to describe the arrangement of the entries.

The Bibliography is in two parts—Part I, containing the entries in the Indian languages and Part II, containing the entries in the English language.

In Part I, publications are arranged, irrespective of language, in one classified sequence, according to the Dewey Decimal Classification, the language symbol being given at the end of the entry. Books in Indian languages belonging to the National Library and included in this Bibliography are indicated by an asterisk mark before the language symbol at the end of the relevant entry.

An outline of the Dewey Decimal System of Classification (16th edition) and a chart of the language symbols have been inserted in the preliminary pages.

The Classified Section arranges the entries in the numerical sequence of the decimal notation as the first line of arrangement, the subarrangement being alphabetically by author, under each decimal number.

The alphabetical index lists in one alphabetical sequence author, title, series, translator, joint author, editor, and cross-references. It goes without saying that authors include Corporate Bodies such as Institutions, Government Departments, Boards, Committees, etc.

In the case of periodicals having a distinctive title, the name of the periodical is treated as author heading.

A small explanation is necessary as to the process of classification followed. An attempt has been made to limit the classification to classes 500, Pure Science, and 600, Applied Science or Technology. The purely economic aspect of the scientific and

technological subjects, e.g. Marketing, Production, Distribution, etc., have been put under the main subject—either Science or Technology. The industrial aspects of an item of Agriculture, for example, have been put under Agriculture, 630 and not Economics of Industry, 338. A basic publication of the C.S.I.R., namely, *The Wealth of India* would be lost if it was simply put under 338. As such, it has been analysed under Industrial Products, 670.954, Economic Geology (mineral resources) 553.0954, Economic Zoology, 591.60954 and Forest Resources, 634.9270954 to draw attention to it from different points of view.

There is a common consolidated Subject Index for both the parts consisting of specific subject headings with the relevant decimal code numbers leading to the entries in the Classified Section.

Names of Indic Authors in both the parts and the titles of books in the Indian languages are transliterated into Roman script with diacritical marks, wherever necessary. The Hunterian system of transliteration, which has international acceptance, has been used.

A statistical table has been inserted at the end of the Bibliography giving the full details about the distribution of books in the several languages and the number of books in each of the sub-section of Pure Science and Technology. Here is a brief analysis of the entries in the Bibliography: Out of the 2,908 entries in the Indian languages, 814 are in Hindi, 358 in Marathi, 348 in Bengali, 268 in Tamil, 190 in Gujarati, 179 in Urdu, 161 in Kannada, 142 in Telugu, 137 in Oriya, and 130 in Malayalam. It will be noticed that the Medical Sciences, represent the largest proportion of the books published in the Indian languages, namely, 818 out of 2,908. A closer scrutiny reveals that quite a few publications on Homoeopathy and Ayurveda, nearly coming to 25% of the total, are included under the Medical Sciences. Agriculture, with 408 publications out of the total, comes second. Among the Pure Sciences, the largest number of books are published in Physics (189), with Astronomy (148), coming second.

Among the English publications, Agriculture has the largest number (493) to its credit, Engineering, (315) coming second (Engineering comes third among the Indian language publications numbering, 220). Among the Pure Sciences, the English publications in Mathematics are the highest, 119 in number, with Physics coming second, with 100.

It is to be noted that 65% of the publications in Agriculture are by Government or Government sponsored agencies. The official publications in Engineering are 33% and in the Medical Sciences, 31%. Publications in Geology contain a 50% proportion of official sponsorship.

I am very grateful to the Editorial Committee consisting of Shri Y. M. Mulay, Shri K. B. Roy Choudhury (Sr.), Shri Benoyendra Sen Gupta and Shri M. N. Nagaraj, for having so ably tackled all the problems facing them in the compilation of this Bibliography. Their planning was admirably executed by the technical staff of the National Library to whom also my thanks are due.
